

Please see p4 table Stage 1 step 1a GTAA

1. Council uses January 2013 count = 292 caravans which @ 1.7 = 172 pitches

But if we use the most recent published count for January 2017 there were 354 caravans which @ 1.7 = 208 pitches

2. Then the Council use the 2011 census: of the 253 Traveller responses 55 is made up from Travellers on sites and 198 from Bricks and Mortar [B&M]. the GTAA discounts all the B&M so they say  $55/3.3 = 17$  households

Grand total 172 + 17 = 189 base line

I say on the same census figures accepting the 55 on site purely for sake of argument

At stage 3 step 8 of the GTAA it says 33% of B&M want a site so 33% of the 198 B&M = 65

$$65 + 55 = 120$$

$$120/3.3 = 36$$

Grand total: 208 + 36 = 244 Baseline

Many thanks

Angus
